

GAME QA · MOBILE QA · CLIENT-SERVER · TEST AUTOMATION

Andrey Shiryavsky

QA Engineer · Manual Testing & Automation

QA Engineer covering the full testing lifecycle for game, mobile, WebView, and client-server systems: requirements analysis, API testing, regression, release validation, and automation.

shiryaaa1@gmail.com +995 551 58 94 72 Batumi, Georgia · Remote linkedin.com/in/alfalucky

7+ years in IT	**5+ years** in Game QA	**PC · Android · iOS** Game & Mobile QA	**Python · C#** test automation

CORE QUALIFICATIONS

- QA Engineer with 7+ years in IT, including 5+ years in Game QA: mobile (Android, iOS) and PC games at Wargaming, Game Insight, Belka Games, Playrix, and My.Games;
- Cover the full QA lifecycle: requirements analysis and clarification, test design, test plans, test cases and checklists, functional, integration, exploratory and regression testing, build and release validation;
- Tested a Telegram Mini App on WebView, APIs, client-server game mechanics, and integrations between the game and web services; use SQL, Unix/Linux, adb, logcat, and CI logs to analyze results and isolate defects;
- Combine manual testing with automation: Playwright web UI tests, Python mobile UI tests (Pytest, Appium, Airtest/Poco), C# scenario tests and Editor validators (Unity Test Framework);
- Build pre-release quality checks: diff validators for configs, assets, and localization in CI (TeamCity, GitLab CI, Jenkins), device-farm runs, and contribution to Test Automation Agent;
- Led a QA team at Game Insight: task distribution, mentoring, and rebuilding the testing process after a company restructuring.

SKILLS

- **Testing types:** Manual, Functional, Regression, Smoke, Integration, Exploratory, Client-Server, UI, Scenario, Content, Performance, Localization, and Compatibility Testing;
- **Requirements & test design:** Requirements Analysis, Equivalence Partitioning, Boundary Values, Pairwise, State Transition, Risk-based Testing;
- **Test documentation:** Test Plans, Test Cases, Checklists, Test Scenarios, Detailed Reproducible Bug Reports, and Test Reports;
- **Web & API:** Telegram Mini Apps, WebView, API Testing, Client-Server Interaction, Game-to-Web-Service Integrations, Test Data Preparation, SQL;
- **Defects & diagnostics:** Defect Isolation, Bug Lifecycle, Jira, adb, logcat, Logs, and CI Test Results;
- **Automation:** Playwright, Python, Pytest, Appium, Airtest, Poco, C#, Unity Test Framework, JUnit;
- **Mobile:** Android, iOS, adb, logcat, Xcode, AWS Device Farm, Firebase Test Lab, BrowserStack;
- **GameDev:** Unity, Unity Editor, LiveOps, IAP, analytics (Amplitude, AppsFlyer, DevToDev);
- **CI/CD & VCS:** TeamCity, GitLab CI, Jenkins, Git, SVN;
- **Test management:** Jira, Confluence, TestRail, Qase;
- **Other:** SQL, Unix/Linux, Agile/Scrum;
- **Teamwork:** QA Leadership, Mentoring, Process Improvement, Cross-team Collaboration.

EDUCATION

- **Systems Engineer** — Belarusian State University of Informatics and Radioelectronics (BSUIR), 2021;
- **Software Engineer** — College of Business and Law, 2016.

CERTIFICATES

- **Automated testing in Python** — TeachMeSkills, 2022;
- **Intermediate English** — Lingua, 2021;
- **Quality Assurance Game** — Wargaming, 2020;
- **Training Software Testing** — Training technologies center "BELHARD", 2016.

LANGUAGES

- **Russian** — Native;

- **English** — Intermediate (B1–B2).

EXPERIENCE

QA Engineer

Duck My Duck | Georgia · Remote | 2026 — Present

Quality assurance for a game project across development and release preparation, including a standalone mobile version and a Telegram Mini App on WebView. Functional, regression, and API testing; test automation development.

Technology stack: Telegram Mini Apps, WebView, API, Playwright, Android, iOS, Test Automation Agent.

- Took part in launching a standalone mobile version of the game: verified core gameplay scenarios and release readiness of Android and iOS builds;
- Tested a Telegram Mini App on WebView, covering client-side functionality, integration scenarios, and APIs;
- Developed and maintained web UI automation tests with Playwright;
- Contributed to Test Automation Agent, a tool for automating game scenario testing that reduces manual regression effort;
- Developed quality-control tooling used by the team during development and release preparation;
- Performed functional and regression testing of game mechanics and user scenarios;
- Isolated defects and filed reproducible bug reports; worked with developers through fix and verification.

QA Engineer

My.Games | Remote | 2024 — 2026

Quality assurance for a large-scale Unity game (Android, iOS): automated game data validation, scenario tests, build validation, and content quality control.

Technology stack: C#, Unity Test Framework, TeamCity, GitLab CI/CD, JUnit, AWS Device Farm, Firebase Test Lab, BrowserStack, Git.

- Built and maintained Editor validators for configurations, assets, localization, and character parameters, so game data errors are caught automatically before manual testing;
- Created diff validators that compare game data versions, surfacing critical discrepancies early instead of during regression;
- Integrated tests into CI/CD (TeamCity, GitLab) with JUnit/XML reports, logs, and screenshots, making results visible to the team on every build;
- Set up test runs on device farms (AWS Device Farm, Firebase Test Lab, BrowserStack) for Android and iOS;
- Wrote C# scenario tests (Unity Test Framework) for modifiers, PvP scenarios, faction bonuses, quest conditions, and leaderboards;
- Improved test infrastructure by refactoring utilities and extending shared libraries for reuse in new tests;
- Validated game builds and content before releases, preventing invalid configurations from reaching production;
- Mentored colleagues on writing validators and scenario tests.

QA Engineer

Playrix | Remote | 2023 — 2024

Gardenscapes, a match-3 mobile game (Android, iOS). UI test automation and regression testing of new features and modes.

Technology stack: Python, Pytest, Appium, Qase, TeamCity, Git, Android, iOS.

- Developed Python UI tests (Pytest, Appium) for new game features and modes on Android and iOS;
- Worked with test execution and parallelization infrastructure in CI (TeamCity);
- Contributed to the project's test framework;
- Prepared test run reports in Qase and CI for the development team.

QA Engineer

Belka Games | Remote | 2022 — 2023

Clockmaker, a match-3 mobile game (Android, iOS). UI test automation, test framework support, and regression testing of new features.

Technology stack: Python, Pytest, Appium, Airtest, Poco, Jira, TeamCity, Git, Unix, Android, iOS.

- Developed UI tests in Python / Airtest / Poco for new game features and modes;
- Defined tasks to extend the test framework for project needs;
- Aligned testing priorities with the product team and obtained tools to speed up testing (cheats, test data, API);
- Maintained and extended the UI test suite; performed regression testing of new features.

QA Engineer

Game Insight | Remote | 2021 — 2022

Guns of Boom, Mystery Manor, The Tribez — mobile games (Android, iOS). QA team leadership, testing of new features and modes, test documentation, mobile device farms.

Technology stack: Python, Pytest, Appium, Jira, Jenkins, Git, Unix, Android, iOS.

- Led the QA team: coordinated work, distributed tasks, and mentored colleagues;
- Took ownership of product quality after a company restructuring: rebuilt the testing process and kept releases stable;
- Improved QA processes and testing efficiency across several projects;
- Created and maintained test documentation: test suites, test cases, checklists, and testing guides;
- Ran tests on mobile device farms, analyzed results, and prepared reports.

QA Engineer

Wargaming | Minsk, Belarus | 2020 — 2021

World of Tanks, an online PC game. Functional, integration, and content testing in a QA department of ~100 engineers.

Technology stack: Jira, Confluence, TestRail, Git, SVN, TeamCity, Python, Unix, SQL.

- Tested client-server game mechanics and in-game UI;
- Performed integration testing between game components, the game, and web services;
- Tested client performance and hardware compatibility;
- Performed content testing: models and scenes, visual and sound effects, localization;
- Created and maintained test documentation in TestRail: test suites, test cases, checklists, and test plans;
- Processed internal and external testing results; filed and tracked defects in Jira.
